

Trees? Yes please!

Future-proof the landscape of Shropshire, and play your part in securing the future of woods and trees in the Ellerton Brook, Lonco Brook and Aqualate Mere catchments. Fully subsidised packs are available, containing 45 tree saplings selected to complement species found within the local area, and to replace those that may be lost to current diseases. Native trees and protection are provided in each pack, and are provided on a first-come-first-served basis, through the **Severn Trent Water – Woodland Trust** partnership. We only have 50 packs available, so make sure to get in early!

Interested? If you'd like more details, have any other queries, or would like to check if you're within one of these catchments, contact your Agricultural Advisor, **Cath Edwards**, using the details below:

Phone: 07508 091799

Email: Cath.Edwards@severntrent.co.uk

Tree packs are available to collect between **10am – 2pm** on the **16th January 2020** from;
Soudley Park Farm, Cheswardine, Telford, TF9 2NR

Why plant trees?

Not only pleasing on the eye, trees punch above their weight when it comes to the benefits they:

- Improve soil quality and can extend the growing season
- Reduce run-off – and subsequent flood risk – and decrease rates of soil erosion
- Can present an additional income source, with potential crops of fruit and nuts
- Provide invaluable homes for wildlife, including pollinators
- Can increase landscape resilience against the many challenges our farming and natural environments face, including tree disease and climate change
- Hold important cultural and historical significance that would be lost if they disappear

Conditions: Max 1 pack per landholding on a first-come-first-served basis. Trees will be supplied with tubes and stakes, for local collection in January.
